

Regular Polygons

Divide the polygons into triangles and complete the table below. Summarize your findings and particularly establish the following relationship: $ext = \frac{360}{n}$

Regular Polygons

No of Sides	No of triangles	Sum of interior angles	Each interior angle	Each exterior angle	Sum of exterior angles

1. The exterior angle of a regular polygon is 18° . What is the number of sides?

2. A tessellation is made out of two regular polygons. Part of the tessellation is shown below. How many sides does the larger regular polygon have?

3. A tessellation is made from a square, a regular hexagon and another regular polygon. Part of the tessellation is shown below. How many sides does the third polygon have?
